Tatra Trucks has introduced its first hybrid vehicle, the Force e-Drive 8×8, designed to reduce emissions while maintaining robust off-road capabilities.

Debuting at the E-Salon in Prague, the hybrid system integrates an internal combustion engine with an electric motor-generator and traction batteries. This new model offers enhanced safety features, a digitized dashboard, and updated cab designs in both short and long versions. Built on Tatra's renowned central load tube chassis, the Force e-Drive aims to improve performance on rugged terrain. Full technical specifications are anticipated with the official launch on November 7.
